MACHINE SETTINGS AND ACCESSORIES

Before making any setting adjustments, make sure buttonhole controls are in OFF position and needle is out of fabric.

Your choice of accessories will depend on the fabric and stitching requirements.

- Stitch Width Selector: 1
- Needle Position: C
- Stitch Length: To suit fabric
- Throat Plate: Straight Stitch or General Purpose
- Presser Foot: Straight Stitch or General Purpose
- Seam and Hem Guide: (Optional, for extra control)

Use the straight stitch foot with the straight stitch throat plate, and selectors set for straight stitching, when your fabric or sewing procedure requires close control. This narrow, hinged foot rides over pins and allows you to control the fabric easily when stitching in a curve or close to the fabric edge. The narrow slot prevents fabric from rising with the needle.

Use the general purpose foot with the general purpose throat plate for all utility sewing. These general purpose fittings must be used together when alternating between straight and zig-zag stitching.
